

**Press Release – September 2009**

**ATTABOX Introduces Heartland Series Polycarbonate Industrial Enclosures**

Temple, Texas, August, 2009 – Attabox, a manufacturer of non-metallic industrial enclosures, has launched a new line of UL 50, Type 3R, 4, 4X, and 12 polycarbonate enclosures. The new Heartland Series represents the most functional and economical NEMA 4X enclosures available today. Sales are facilitated through a national network of the best manufacturer's representatives agencies.

Attabox Heartland Series enclosures are manufactured in Texas with a high-grade durable Lexan polycarbonate. Current sizes available range from 8x6x4 through 16x14x8 (inches). Key features include: external latches, removable lid, high performance inserts, integrated lock hasp, flush-fit swing panel (patent pending), and DIN rail mounting system. Enclosures are available with a clear or opaque lid. Attabox can provide enclosures, modifications, panels, and accessories, as well as component installation. Attabox carries stock and has product available in all sizes. Order-to-ship times are usually within 2 business days.

Mike Meinscher, president, Sales and Marketing, is excited to be leading the commercialization of the new Heartland Series Enclosures. Mr. Meinscher stated, "The Heartland Series is the most functional non-metallic industrial enclosure available. Two key features are the polycarbonate resin and robust design. Not only is it the strongest in the industry, but it provides for a uncomplicated modifiable surface. Holes and cut-outs can be drilled with standard devices, whereas fiberglass and metal can require protective clothing and special tooling. Additionally, the externally attached latches will give the user the comfort to know that leakage into the enclosure will not be due to a manufacturing weakness. Attabox Enclosures are durable, ridged, strong, functional and modifiable."

Bill Evatt, president, Operations and Finance, commented, "The Attabox Heartland Series Enclosures are priced competitively, operating and production costs are good, and the national network of sales representatives are the best in the market." When asked about the state of the business, Mr. Evatt said, "The revenue growth rate has been tremendous, since the full product line became UL certified. Attabox still has plenty of production capacity, so sales staff will continue to explore and execute on new opportunities."
