

Heartland Series

Low Temperature Performance

Attabox Heartland Series enclosures are manufactured with Lexan polycarbonate designed to perform in cold weather applications. In general, the product performance will not be adversely affected until temperatures below -40°F are realized. At temperatures below this level, stress, tension, and pressure could start to impact the enclosure's reliability. This includes the latching, opening and/or incidental impacts. In the absence of these potential threats, the enclosures should remain unaffected by the low temperatures. Upon return of temperatures above -40°F , performance reliability should return to normal.

In the Attabox literature, we document a normal operating temperature of -20°F to 240°F . We do this to provide a safe operating range, as product application and enclosure placement is determined by the end user, not by Attabox. End-use testing of specific applications and enclosure placements are key to determining the application specific limits.

Before using this product, the user is advised and cautioned to make its own determination and assessment of the safety and suitability of the product for the specific use in question and is further advised against relying on the information contained herein or previously represented as it may relate to any specific use or application. It is the ultimate responsibility of the user to ensure that the product is suited and the information is applicable to the user's specific application.
